

Optimized Nutrition with HGVSUPERIOR PLANT NUTRITION

HGV Plant Nutrients are being used by many of the leading producers in the country. Better quality, higher yields, and lower cost are just a few reasons to switch from your current line.

HGV sources the majority of our raw materials from suppliers in North America, South America, and Israel. These suppliers have rigorous quality control processes in place and provide certificates of analysis for every lot produced.

HGV blends all of our formulas in our own production facility with proprietary blending equipment custom built to our specifications versus hiring “toll blenders” to manufacture our products as most other nutrient companies do. By sourcing only the highest quality raw materials and blending everything on site, we offer the most consistent, highest quality soluble fertilizers on the market.

Dosatrons Nutrient Delivery System is a perfect match with HGV nutrients. The system thrives anywhere, from indoor facilities, greenhouse environments, and even outdoor grows. The nutrient delivery system accurately delivers the desired EC directly to your plants or can be used to fill reservoirs saving you time and money.

When you combine the forces of feeding your plants with HGV Nutrients using a Dosatron Nutrient Delivery System, you can be assured of repeatable consistency for years to come!

HGV NUTRIENTS

DOSATRON®

MIXING SHEET

CONCENTRATE SOLUTION

2.5 lbs per gallon

This is the recommended Dosatron starting set point to achieve an EC of 3.0.

DOSATRON STARTING SET POINT

FLOWER/GROW

- 175:1, measure the EC and adjust accordingly.
Need to hit a target of 1.8 EC

BASE

- 250:1, measure the EC and adjust accordingly.
Need to hit a target of 1.2 EC

When working in conjunction they should hit an **EC of 3.0**

Dosatron D_MZ2 models are **required** for all three concentrates
